Key Issues

1. Players can choose not to pick up weapons.
2. There might be little issues triggering doors, but they can work.
3. Players can ignore enemies and just go.

Installation & Play Instructions

Installation

1. Playing in Half Life 2 using BSP files.

Play

1. Playing in Half Life 2 using BSP files.

Walkthrough

Overview Map

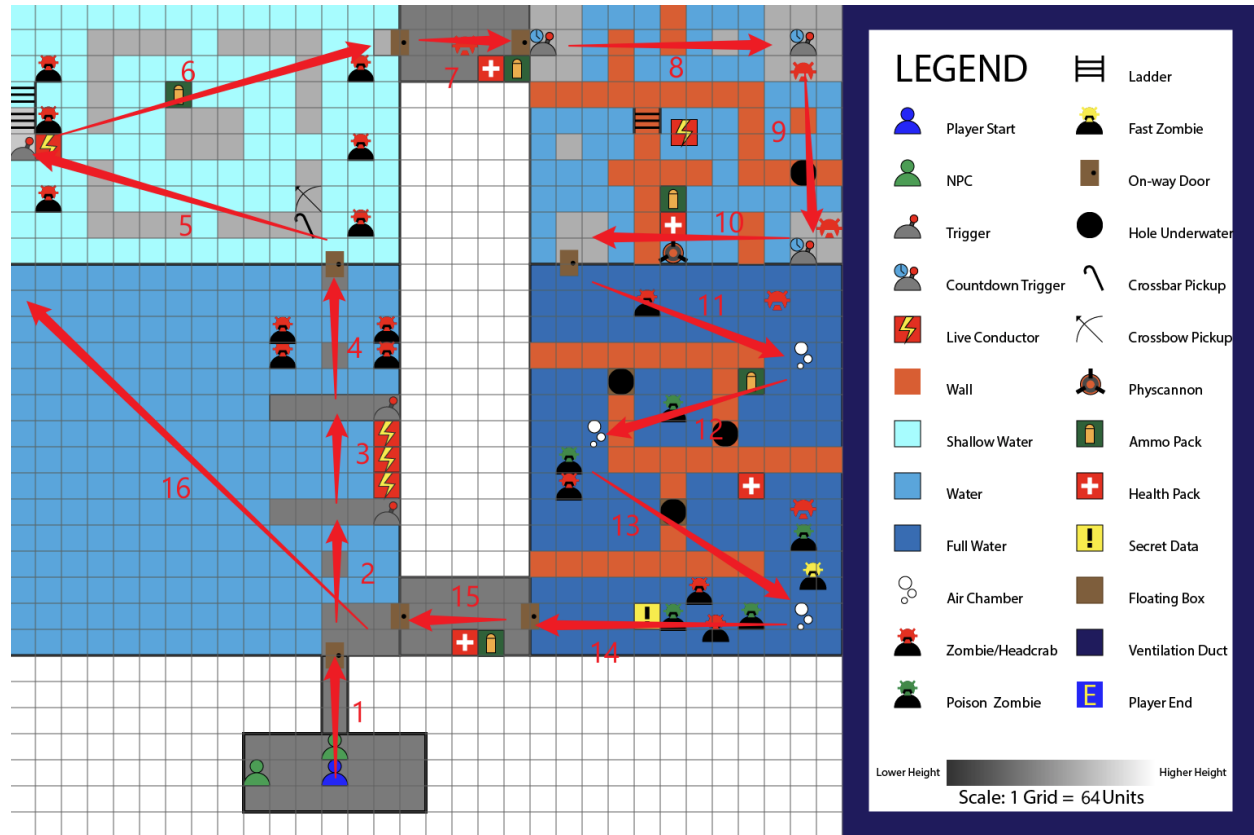

Figure 1: Overview Map

Map Label	Top Level Walkthrough	Development Notes
1	From the initial room, a cramped submarine space obtains protective suits and mission information—to find secret data and escape from a defunct underwater base that has been exploded and is on the verge of collapse.	Place NPCs, have conversations with them, and provide protective clothing.
2	Upon entering the first room, you discover that the water is electrified; jump to the second platform.	The presence of a body in water and the electric sparks suggest that water conducts electricity.
3	When the player presses the button, the water stops conducting electricity, allowing it to flow to the third platform.	The distance between the two platforms must be such that players cannot jump across them.
4	At this point, a zombie emerge from the water and walk towards the player. Since the player has no weapons, the only option is to press the button again to electrocute the enemies.	Place four zombie prone prefabs
5	Enter room 2, obtain the crossbow and crowbar, and fight several enemies.	Place 6 zombies, crossbow and crowbar

6	A button was found in the corner of the room. Pressing it made the water conduct electricity, eliminating all enemies at once.	
7	Hallway, there's a headcrab jumpscare, as well as ammunition and health supplies.	
8	Upon entering room 3, pressing the red button will cause the water to lose its electrical conductivity for 9 seconds , requiring players to quickly proceed to the next safe platform.	Place a headcrab
9	The second section features a conductive water path with a 9 seconds countdown. Player will pick crossbow here, which can work under the water.	
10	The third section features a conductive water path with a 9 seconds countdown	Place a headcrab
11	Entering room 4, which is completely submerged in water, one finds oxygen in an oxygen chamber on the ceiling.	
12	Second underwater section	
13	Third underwater section, Obtain secret data here.	
14	Hallway 2, get healthcharger.	
15	Upon entering and returning to room 1, the base is completely leaking, and the water level begins to rise. The NPC will tell the player not to return to the submarine and to look for a way out upwards. As the water level rises, the player spirals up the path, eventually reaching the top to shut off the water's electrical conductivity, breaking the roof glass and swimming ashore. The NPC will meet the players on the shore, and the level will end.
